

Tank Level Monitor

The Tank Level Monitor (TLM) is a compact and cost effective sensor, which integrates with Water-Insight's web-based dashboard to provide valuable tank level information.

With Water-Insight you will be able to monitor an unlimited number of tanks on your mobile device. You will also be able to share the data with other farm staff and organisations that are given permission.

Each TLM unit is designed to be robust and reliable in all weather conditions and has an extended battery life that will save you money. Alerts can also be set up to notify you about critical water levels or significant rate of changes, helping ensure you never run out of water.

The solar charging, battery operated design and built in radio capability, enables monitoring of tanks on farms as well as in semi-urban areas.

The TLM Starter Pack Includes:

- Fully integrated housing unit, equipped with a solar panel and a 6000 mAh lithium-ion battery
- Highly accurate 3 meter pressure sensor
- Sensor gateway complete with a power adapter
- All necessary antennas, cables and mounting screws
- A comprehensive user guide for easy installation
- Your first year subscription to Water-Insight's cloud-based dashboard
